

IT Services for Architectural Firms

Today's IT networks now offer architectural firms major productivity gains and communication advantages over traditional technologies and tools.

Traditionally, paper has been the medium of architects, and the pencil, T-square, and triangle have been their tools. In recent years, however, workstations, IT networks, and industry-specific software such as AutoCAD and the database-driven modeling tool Revit have transformed the process of architectural design. Now, for example, architects can make the numerous changes that are an inevitable part of their work far more quickly and easily. And, with IT tools such as email, communication and data exchange with contractors, engineers, and others working at various locations has become far more convenient and productive.

Along with this solution, however, came new IT challenges:

- How do architectural firms manage increasingly complex, rapidly evolving networks with maximum effectiveness?
- How could they make the networks work for them instead of—as was often the case—against them?

Call the CADapult ITeam today to find out how to overcome these challenges as well as the challenges your IT infrastructure may be facing.

What Our Clients Say

“Just as GWWO strives to provide the highest level of service to our clients, CADapult ITeam has consistently provided us with informed technology advice and attentive service. CADapult's state-of-the-art services, responsiveness and unwavering customer focus have been of great value to our firm.”

- Paul Hume, President,
GWWO, Inc./Architects
